

Eclipse Pricing System

INSTALLATION INSTRUCTIONS

This application was developed by Lester Building Systems, LLC to serve as an ordering tool to purchase Eclipse Roof System products from Lester Buildings. It contains part prices as well as a system for quoting and submitting orders.

The application is only supported on Windows installations (Windows 8.1 or higher). The order files that it generates are submitted to Lester Buildings via email. The application uses server smtp.gmail.com along [port 587](#) to transfer the order files. Aside from these order emails, it generates no other internet traffic.

The current version of the application can be downloaded from:

<http://www.eclipseroofsystem.com/download>

Click on the blue “Installer Package” button to download. This button will redirect to DropBox.com to download a file named [setupECPP.exe](#). Follow the DropBox instructions to download the file.

Figure 1 – Download the installer by clicking the “Installer Package” button

Download the file to your Desktop or to your Downloads folder and run it to install the application.

Figure 2 – Download the installation package from the provided Dropbox link

Your internet browser may display alerts or warnings about downloaded EXE files, such as the one shown below in Figure 3. These alerts happen because this program is brand new and has been downloaded relatively few times, and therefore it has low “internet reputation.”

Figure 3 – Internet browsers display warnings about downloading most low-frequency installation packages

A blue Windows SmartScreen dialog may appear, like the one shown in Figure 4. This is the Windows version of the same warning described above.

Figure 4 – Click [More Info] and then click [Run] to continue

Note that these installation packages (and the application files contained inside) are digitally signed using a DigiCert certificate registered to Lester Building Systems, LLC. The application needs to be installed with Administrator privileges.

Figure 5 - The installer package and program are signed with a DigiCert certificate

Figure 6 - The installation requires Administrator privileges to run

After installation is complete, click [Finish] to close the installer. It should automatically launch the application. The app requires a user login and password combination, which are provided to users in a separate email.
