As our products continually improve, we reserve the right to change product specifications without notice. Colors shown are representative only and are limited by printing and viewing conditions. For exact colors, ask your rep for samples. Oil-canning (perceived waviness) is inherent in the flat areas of steel panels and is not a cause for rejection. © 2016 Eclipse Roof System

## ECLIPSE ROOF SYSTEM® BEAUTY + FUNCTIONALITY

Strong. Sleek. No Leaks. Exceptional Value.

Smartly designed with unmatched curb appeal, the patented\* Eclipse Roof System is strong and weathertight.

For the first time ever, you'll benefit from a roof system that combines the structural integrity of a through-fastened roof with the sleek appearance of a standing seam roof. All at a lower cost than standing seam roof systems.

### STRONG.

- The unique patented rib and snap-on batten system allows through-fastening of 36" wide panels.
- Through-fastened panels provide diaphragm strength not available with most standing seam panels.
- The shape and height of the major rib give the Eclipse Roof System panel superior strength.

### SLEEK. NO LEAKS.

- The attractive batten snaps over the ribs, concealing the screws, creating bold clean lines.
- The batten conceals the screws making it weathertight.

### EXCEPTIONAL VALUE.

- Our patented 36" wide Eclipse Roof System panel installs more quickly and easily than the typical standing seam panel.
- The Eclipse Roof System requires  $\frac{1}{3}$  to  $\frac{1}{2}$  the number of panels and fewer screws than the typical standing seam roof system.
- The 26 gauge Eclipse Roof System panel can be installed over open purlins. No roof deck is required, saving material and installation costs.

## ECLIPSE METAL WALL SYSTEM

### BEAUTY AND FUNCTIONALITY.

- The Eclipse Metal Wall System is a 2-piece system that is a true board and batten, unlike other metal siding panels that are roll formed to create the appearance of a board and batten siding.
- The attractive batten snaps over the ribs, concealing the panel fasteners, creating bold, clean lines.
- The striking craftsman style trim package adds unmatched curb appeal.
- The batten conceals the metal fasteners making it a weathertight metal siding.

### STRONG.

- Through-fastened panels provide diaphragm strength not available with traditional board and batten siding.
- The structural panel does not require an underlayment board.
- The shape and height of the major rib give the Eclipse metal siding panel superior strength.
